Date: 17th June, 2020

Agenda:

- Discussing the process of opening the lockdown
- Discussing the process for stabilising the economy

All India Political Party Meet

Policy Statement

The BJP govt. made a very spontaneous decision to fight with the covid pandemic. Due to the increasing risk of Covid-19 in the world, India imposed a nationwide lockdown from 22 of March.

All services except essential services were doomed shut. India also announced that they are stopping domestic flights and said the majority of the

country was under complete lockdown to stop the spread of coronavirus as the number of people dying from the disease increased across south Asia. It was a great call by the govt. to slowdown the spread of corona virus all over the country.

We know that during the lockdown all manufacturing services came to a halt leading to an economic slowdown to the already suffering economy of India. After this the problem of migrant workers hits the country as they were not having money and food and were demanding to go home. But after all the odds India is now in the situation when the country have to free from lockdown.

Now the process of opening the lockdown is bit dangerous as every citizens of the country have to understand that any small mistake can create life risks for many that's why wearing masks and gloves and also maintaining social distancing is compulsory for all.

Places where huge public gathering occurs like malls and cinema halls will not open for safety reasons.

We know that covid cases has increased in India with a good pace but still we have to open the

lockdown to stabilise the economy as with the halting of production during lockdown and to working with just 30% of the workforce the manufacturing industries have come to hit a big rock.

Workers leaving towns in fear of corona and the loss of lively hoods have resulted in the decline of the available workforce in any industry.

Import and export markets have also been impacted. The stock exchanges have also been impacted heavily witnessing downfall in capitalization as never before the 2008 economic crisis.

With the uncertainty prevailing on the availability of a vaccine or a cure, the future of India's economy is not looking promising.

But with the motto of "ATMANIRBHAR BHARAT" by our Honourable Prime Minister the country will attain a stabilize economy and also will be able to fulfil the dream of 5 trillion dollar economy till 2024.

To stabilize the economy, offices and factories are allowed to reopen their places but they also have to follow the guidelines by the central govt. i.e wearing masks, maintaining social distancing, etc.

BJP govt. also gave huge amount of money under “Pradhan mantri gareeb kalyan yojna” for poors to fight against corona virus which is around 1.7 lack crore.

BJP govt. also approved package of 15000 crore For states and UTs to fight with covid19.

So, BJP govt. will be able to stabilize the economy and also capable to handle every situation under the leadership of our prime minister.
