

# POSITION PAPER

Name of the delegate: P. Manisha

Country: South Korea

Committee: WHO

Agenda: Improving Access to Immunization and

Halting the Spread of Vaccine-preventable diseases.

## INTRODUCTION :

**As of now, the trending and well-known disease is covid-19. This disease took many lives all over the world and people are trying to control this covid-19. People trying to discover new ways of methods to improve immunity to stop this disease from spreading and of in South Korea they are well aware and handled the disease MERS (Middle East Respiratory Syndrome) Which has caused on 2015, so they might have an idea regarding covid-19, as they have already faced the scariest disease such as MERS, so this enables them to withstand this period. When all countries are locked down to prevent the spreading of this disease while South Korea was taking care of this disease without a quarantine until late 2020. The country uses new ways and methods to decrease the Spread of the disease. South Korea focus on Improving the immunization of the people by vaccination. Some diseases are**

prevented from certain vaccines but as of covid-19 the process of finding vaccines is going on.

#### ABOUT THE COUNTRY: I

South Korea is located in East Asia. It is a well developed and developing country. A famous country with lot of entertaining Young's and cultural stuffs which has been making this country a well famous country on this era. South Korea is one of the country closest to china so the covid-19 affected this country well compared to other countries. South Korea is facing more covid-19 patients mainly in the capital city Seoul and Daegu. South Korea also faces lot of death records due to this the population is decreasing. And economics are affecting too.

#### CURRENT SITUATION: (Policy & Proposed solutions)

Recently South Korea adopted a new way such as massive testing, intensive contact tracing and promotion of social distancing. And also, government used the cell phone location data, CCTV cameras and also tracking ATM, debit and credit cards so that they can identify the covid-19 cases and to check whether the people crossed the people who have covid-19. This shows the country used the technology well to halt the spread of the disease but this practice led to know the patients personal details public so later they stopped to post the personal details public . But not only such ways, the country starts covid-19 vaccination campaigns in Seoul (the capital city). Korea Disease Control and Prevention Agency (KDCA) have made the people to get their first dose to boost the immune, not only the first dose they have injected the second dose too. And now they have the "Moderna" the fourth covid vaccine.

The government of South Korea demanded that the Shincheonji Church turn over its full membership list, through which the Ministry of Health identified thousands of worshippers has been infected through the virus.

South Korea maintain about 600 screening and screening centers and about 150 diagnostic laboratories. As of the place Daegu is most infected area in South Korea so they recruited about 2,400 health workers.

As of known the people of South Korea usually wears mask because they are aware about the previous disease MERS. South Korean government act effectively with the strategy "TRUST" which is "Transparency, Robust screening and quarantine, Unique, Strict control and Treatment " .

Ways to improve the immunity and halt the spread of disease:

**According to me, nothing can be done suddenly! It needs their own time.**

**Concentrating on by each and each state alternately and making sure that all the people took their vaccines.**

**The natural and traditional medicine should be taken regularly. Doing yoga and exercises may improve our immunity. Isolate each and every person who are near the virus attracted people. There must be separated city where only isolated people stay.**

**Vaccines should be injected to people in a particular place, and the people must visit there to inject vaccines according to the time allot to them. Rather than going to hospital using technology to call the doctor is better. Also, not only doctor but also shopping the medicine in the online worth rather than going out.**

CONCLUSION:

**South Korea government follows the effective methods and working hard on this period, other countries too following their effective methods. So therefore, South Korea become a role model in this period for other countries. Although the outbreak is still but the country keep up their work. Also because of the methods they follow they are withstanding this period without disturbing the economic. South Korea rapidly increase the technical solutions for this disease. That's why South Korea is meeting huge success globally.**

**Not only South Korea other countries may also succeed if they follow their steps and also by self-awareness. We can only save ourselves and others only by awareness.**
