

COUNTRY- ARMENIA
UNITED NATIONS GENERAL ASSEMBLY
HOW CLIMATE CHANGE WILL FURTHER THREATEN INTERNATIONAL PEACE AND SECURITY .

The delegate of Armenia would like to clarify its stances on how the climate change will threaten International Peace and Security. Armenia is from one of the most beautiful countries in the world. Armenia is a country with breathtaking natural sights, taste a variety of cuisines and engage with history but apart from all this it is also affected by climate change. Projections suggest Armenia could experience warming at levels significantly above the global average, with potential warming of 4.5 degree Celsius by the 2090's , above the 1986-2005 baseline, under the highest emissions pathway .

Climate change is a major risk to good development of the country . Armenia's climate can be described as highland continental, with large variation between highs(June to August) and winter lows (December to February). Climate change is the biggest threat so it needs bold collective actions. Numerous assessments indicate that there will be more change in Armenia's climate over the next century. Temperature rise, precipitation, river and lakes level fall, heat waves, droughts, landslides, mudflows, flood and many more will become more common in coming years. The nation's average temperature has risen by more than 1.2 degree Celsius since 1929. The climate change is continuously happening and affecting the nation. Due to climate change so many factors of the country are affected by climate change. Natural resources and economic sectors both are affected by climate change. If natural resources vanish then economic sectors can't even exist. The main source of life is water and soil and both are affected by climate change. The economic sectors like agriculture are affected because soil is not good so how can we expect crops to be good. If food will not be there life also on this cannot exist and if it keep continuing in same speed no lives would be left on planet Earth. If we want to live life it is important we should take serious steps towards climate change.

To overcome the bad affects of this problem country has planned out the things. They made some policies and planned some programs related to this. They made policies like Technology Needs Assessment Report , National Communications to the UNFCCC, National Platform for Disaster Risk Reduction, Wildfire Action Management Plan, National Forest Policy and Strategy, Eu- Armenia Cepa Roadmap and other. Some of the policies are into force and some are just opted till this time and will come into force soon. Government is working very hard to overcome this problem now they just need the support of common citizens. If we don't overcome over this now then in future it will definitely going to threaten International Peace and Security.

In conclusion as the delegate of Armenia I would like to give my view point and I would be very grateful of the government of Armenia and common citizens if they pay attention towards it. I would say that common people now needs to participate in this as it is not at all a small issue if it is not control it may lead end of this planet also. So common people need to take some steps as they should start saving the natural resources like trees, water , soil because they all are interrelated as if like there will be more trees so there will be less increase in temperature, we all should plant more and more trees and should save water and soil because if we are living today is just because of them only , this thing you all know very well. Many legends like Sadguru have started a journey of save soil and he is travelling throughout the world on his motorbike and influencing people about it, so may governments are supporting

him. So we should support such people and take part in all these kind of activities. I would like to suggest that we should handle this matter with calmness and stop blaming each as this won't help and would only give rose to fights and instead of this we all should start supporting each other and together work for it. If you all want to live life so work for it together. "WE HAVE A SINGLE MISSION:TO PROTECT AND HAND ON THE PLANET TO THE NEXT GENERATION."
