

# POSITION PAPER

COUNTRY: CHINA

COMMITTEE: UNESCO

TOPIC AREA: IMPACT OF CLIMATE CHANGE ON WORLD SIGHT

DELEGATE: AAROHI CHAUHAN

Greetings to the chair and board of members. Thank you for the recognition.

In 2013, China issued its national strategy for Climate Change Adaptation and set goals of reducing vulnerability, strengthening monitoring, and raising public awareness. Efforts on implementation have been put in adapting forestry, meteorological management, infrastructure and risk planning.

It's important to be aware that our planet is going through some major climatic changes and how the changes can affect us in the years to come. From rising sea levels to extreme temperature, there are plenty of ways climate change could affect us.

SOLUTION:

As a solution, we Chinese suggest that we are cutting more than enough trees which is not good and is causing erosion and due to lack of trees we are experiencing either extreme hot temperature or facing deep floods. We request to take action on this dangerous issue or it can be worse in future years.
