

POSTION PAPER

Committee- International Telecommunication Union

Agenda- STRENGTHENING GLOBAL STANDARDS FOR SECURE DIGITAL INFRASTRUCTURE, ARTIFICIAL INTELLIGENCE GOVERNANCE, AND UNIVERSAL CONNECTIVITY IN EMERGING ECONOMIES

Country- People's Republic of China

The delegation of China recognizes that the strengthening of global standards for secure digital infrastructure and artificial intelligence governance is a matter of critical international importance. China acknowledges that universal connectivity in emerging economies is the cornerstone of sustainable development and digital equity, ensuring that no nation is left behind in the technological age. China calls upon this body to take coordinated multilateral action in building a secure, connected, and digitally empowered world for all nations.

China emphasizes that through landmark initiatives such as the Digital Silk Road, the Global AI Governance Initiative, and the China Standards 2035 policy, China has demonstrated its unwavering commitment to building secure, inclusive, and interoperable digital infrastructure across emerging economies. China urges this body to recognize these frameworks as models for international cooperation, where affordable connectivity, ethical AI governance, and cybersecurity standards are advanced collectively for the benefit of all nations.

China's position is rooted in its core principles of mutual respect, technological sovereignty, and shared prosperity, believing that every nation holds the right to develop and govern its own digital infrastructure free from external coercion. Through its dedication to South-South cooperation, China continues to empower emerging economies via technology transfer, capacity building, and affordable connectivity, reaffirming that a secure and universally connected digital world is a shared responsibility of all nations.

The Delegation of China reaffirms its commitment to advancing secure digital infrastructure, ethical AI governance, and universal connectivity through multilateral cooperation and shared responsibility. China calls upon all member states to unite in establishing inclusive global standards that empower emerging economies and bridge the digital divide. A secure and connected world is not the privilege of few, but the right of all.

The Delegate of China,

Gehna Nukavarapu
