

COMMITTEE : INTERNATIONAL TELECOMMUNICATIONS
UNION

COUNTRY : FEDERAL REPUBLIC OF GERMANY

AGENDA : STRENGTHENING GLOBAL STANDARDS FOR
SECURE DIGITAL INFRASTRUCTURE, ARTIFICIAL
INTELLIGENCE GOVERNANCE, AND UNIVERSAL
CONNECTIVITY IN EMERGING ECONOMIES

The Federal Republic of Germany believes that technology should be safe, fair and accessible to everyone. In today's world , all the countries depend on internet and digital systems for education, healthcare, business and communication. This is why it is important for all countries to work together to make AI and digital technology safe, secure and accessible to everyone.

Germany supports stronger cybersecurity to protect people, businesses, and governments from cyberattacks. Each country should follow common

security standards and share knowledge to keep digital systems safe. Germany also believes that governments and private companies should work together to build stronger, secure and safer digital infrastructure.

Germany believes that Artificial Intelligence (AI) can improve people's lives, but it must be used responsibly and carefully as AI can't be predicted. AI should be fair, transparent, and should always respect human rights and privacy. Germany supports international rules that encourage innovation while preventing the misuse of AI.

Germany is also concerned that many people in developing countries still do not have reliable internet access. Everyone should have the chance to benefit from technology. Germany supports investing in affordable internet, improving digital education, and helping developing countries build better digital infrastructure through international cooperation.

To solve these challenges, Germany suggests;

- In creating common international cyber security standards to protect people's privacy and to protect businesses from cyberattacks.
- Making global guideline for the safe and responsible use of AI.
- In helping developing countries improve their digital system.
- Expanding affordable internet access ,and digital technology so that everyone has access to internet.
- Encouraging countries to share technology ,knowledge ,and best practices.

Germany is ready to work with all Member States to build a digital future that is safe, fair, and connected for everyone.
