

POSITION PAPER

Committee: UNCSW

Country: Kingdom of Jordan

Agenda: Regulating the impact of beauty filter on the mental health of youth and body image standards

I. The people from the Hashemite Kingdom of Jordan think that traditional media, social media and artificial intelligence have changed the way we think about our bodies. Artificial intelligence systems and fake pictures on the internet often show us beauty standards, which can make people feel bad about themselves anxious and even lead to eating disorders and discrimination especially among young people. While new technology has helped us communicate and grow our economies it has also brought problems because there are no rules to stop intelligence from being biased and hurting people.

The world has tried to fix this problem with things like UNESCOs idea for intelligence ethics and programs to teach people about media and information. However there are still problems because not everyone has the access to technology and information and there are no global rules for artificial intelligence. The Hashemite Kingdom of Jordan thinks that new technology should always respect peoples dignity, culture and basic rights.

II. The people from Jordan think that artificial intelligence should be fair and we should be able to understand how it works. We should also be able to keep our information private and respect cultures.

In Jordan we have done some things to show we care about this issue:

We made a plan for intelligence ethics in 2022, which is run by the Ministry of Digital Economy and Entrepreneurship.

We have rules for intelligence that say it should be fair, transparent and respect Jordans culture and religion.

We work with UNESCO to teach people about media and information so they can tell what is real and what is not on the internet. We keep investing in technology but we want to make sure it is used responsibly. The Hashemite Kingdom of Jordan thinks that we should work together with countries to make sure artificial intelligence is used in a good way.

III. The people from Jordan have some ideas:

We should teach people around the world about media and information so they can understand what they see on the internet.

We should make rules for artificial intelligence that reduce bias and make it more transparent. We should work together with governments, technology companies, teachers and communities to

promote digital media. We should help countries develop their rules for artificial intelligence that respect their culture and values.

IV. The people from the Hashemite Kingdom of Jordan want to say that we care about using technology in a good way and working together with other countries. We think that technology should help people not make them feel bad, about themselves. By teaching people about technology promoting artificial intelligence and working together we can make the internet a better place where everyone is treated fairly and respected. The Hashemite Kingdom of Jordan is ready to work with all countries to find a solution that works for everyone.
