

POSITION PAPER

Committee:- WHO

Portfolio:- Mexico

Agenda:- Deliberation of restructuring of global healthcare system

Mexico, a nation deeply committed to advancing global health, recognizes the imperative for a comprehensive restructuring of the global healthcare system. The COVID-19 pandemic has underscored the need for collaborative, equitable, and resilient health systems to address current and future challenges.

I. Current Global Health Landscape

Global Health Inequalities: Despite progress, health disparities persist, with developing nations facing disproportionate burdens of disease and limited access to essential healthcare.

Pandemic Preparedness: The COVID-19 pandemic has exposed gaps in global health preparedness, emphasizing the necessity of robust surveillance, rapid response mechanisms, and equitable distribution of vaccines and treatments.

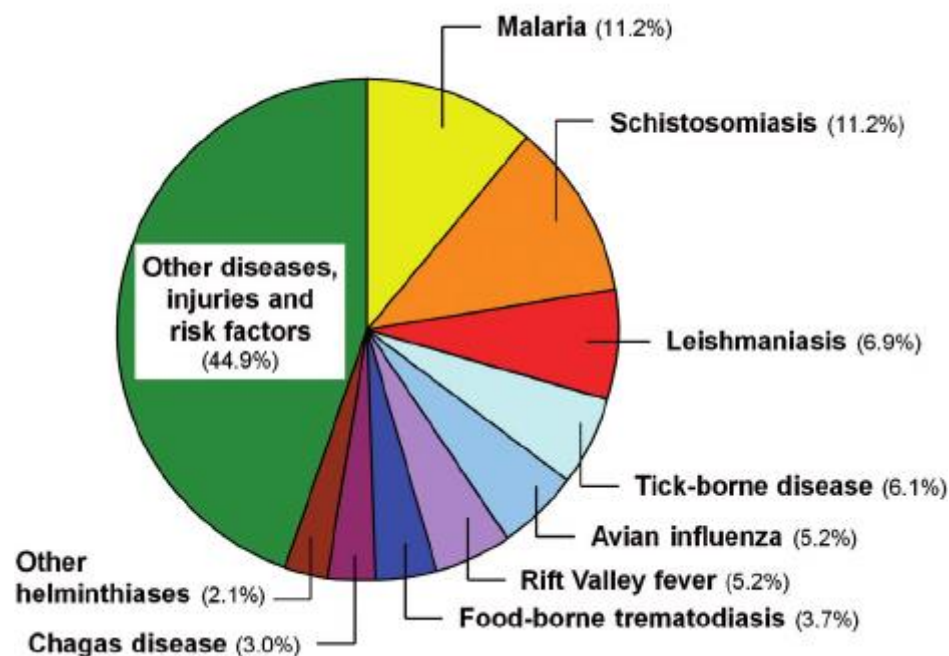

Economic Impact: Health crises, such as pandemics, not only pose direct threats to public health but also have severe economic repercussions globally, necessitating a holistic approach to healthcare restructuring.

II. Mexico's Commitment and Contribution

Healthcare Infrastructure Investment: Mexico has increased investment in healthcare infrastructure, focusing on enhancing primary care, strengthening hospitals, and expanding access to essential services in rural and underserved areas.

Vaccine Access Advocacy: Mexico supports initiatives for equitable vaccine distribution, emphasizing the importance of fair access for all nations, irrespective of economic status.

South-South Cooperation: Mexico encourages increased collaboration among developing nations to share resources, expertise, and best practices, fostering a collective effort towards a more equitable global health landscape.

III. Proposals for Global Healthcare Restructuring

Equitable Access to Medicines and Vaccines: Advocate for the establishment of an international framework ensuring fair and timely access to essential medicines, vaccines, and treatments, particularly during health emergencies.

Capacity Building and Health Workforce Development: Prioritize global investments in training healthcare professionals, enhancing the capacity of health systems, and promoting knowledge exchange to address workforce shortages.

Digital Health Integration: Promote the integration of digital health technologies to improve healthcare delivery, enhance surveillance systems, and facilitate data-sharing among nations for better preparedness and response.

IV. Conclusion

Mexico, cognizant of the urgent need for a global healthcare restructuring, stands ready to collaborate with fellow nations to ensure health equity, strengthen health systems, and foster international cooperation. Let us work collectively towards a healthier and more resilient world for all.
