### Topic: Prevention of war between US and China in context to the outbreak of Covid-19

In the recent months, the Covid-19 outbreak has caused the world a lot of damage. The economy has gone down, many people are left unemployed and governments around the world are getting a headache trying to control the virus.

People are often saying that it is a biological weapon which china has released because it might be earlier existed but we humans were not aware of it. This pandemic has caused a lot of chaos in Israel also but the situation is still under control cases rising up to 19,008 and total deaths 300(till date 14 th june). Our country had put a ban to the people who were coming from south Korea and 14 days

isolation was also followed. Social distancing and several regulations were also followed. There was a loss of 12.9 billion to our country.

Both US and China are in the favour of Israel so my country would say that no war so far should take place. As both the countries would be using their nuclear weapon- The most powerful weapon on earth. Which has the power to destroy the whole country and few parts of the neighbouring too. The normal people who are not even responsible will have to suffer.

But yes if this allegation comes out to be true that Covid-19 was made in the lab of Wuhan but also released I as a delegate of Israel would then definitely say that then china should also suffer, in few days or in months 1% of the world will die. If china has the cure they have to disclose it and I would suggest that China should then give some amount of money to the countries who has suffered a lot. Like US.

“Let them also taste the fruit of their own deed.”
