

# POSITION PAPER

**NAME OF THE DELEGATE:** Ananya Nohria

**SCHOOL NAME:** The British Co-Ed High School

**COMMITTEE:** World Health Organization (WHO)

**COUNTRY:** Brazil

**AGENDA:** Reviewing and discussion upon the implementation of Immunization Agenda 2030 with special emphasis on LEDC's

## *Immunization Agenda 2030: A Global Strategy to Leave No One Behind.*

Immunization is the right of every child. This thought led to the formation of The Immunization Agenda 2030 (IA2030). The Immunization Agenda 2030 (A2030) introduced by WHO aims at achieving a global vision and strategy for vaccines and immunization for the decade 2021-2030, It draws attention towards infectious diseases and their cure and protection. IA2030 states immunization to be a key contributor to people's fundamental right to enjoy physical and mental health and also create a healthier, safer, more prosperous world for all.

"Ordem e Progresso" ("Order and Progress"), this is our motto. Brazil has rediscovered itself and this rediscovery is being expressed in its people's enthusiasm and their desire to mobilize to face the huge problems that lie ahead of us. Though Brazil being an LEDC, has greatly emphasized on this agenda. In the past few years Brazil has faced a highly miserable and infectious disease called Yellow Fever. Brazil managed to control the outbreak, recording only nine cases and three deaths between 2020 and 2021. Since 2020, the country expanded the yellow fever vaccination area to the entire country and adopted a single-dose schedule starting at 9 months of age to protect younger generations for life. Brazil successfully overcame yellow fever but soon in 2020 the whole world including Brazil experienced a life-threatening nightmare called COVID 19. During this period Brazil faced a mass Destruction to its human resources. Brazil procured 1,022,400 doses of COVID-19 vaccine through the COVAX Mechanism. After a time period of around four weeks Brazil was able to decrease the rate of increase in Covid 19 patients. The number of deaths and hospitalizations also decreased. Brazil has an established pool of scientists and doctors who are prepared to do vaccine

research and development. Our healthcare system for HIV infected individuals is best versed. Although an LEDC, Brazil is giving its best to protect its country from various diseases and securing their future goal to be fully immunized.

Being the delegate of Brazil I suggest some proven strategies like reducing costs for healthcare facilities, linking vaccination to Women, Infants, and Children, home visits by health care workers which would work well to increase coverage among specific populations. "Delegates", it's time to make the Earth better place to live, without diseases and disorders.
